

## Recommendations for Furniture Care

### Veneer products:

The furniture is lacquered and does not require any particular care. Use a dry cloth for daily cleaning. Once or twice a month wipe with a cloth tightly wrung in clean lukewarm water.

### Linoleum:

Linoleum is daily cleaned with a damp cloth using a neutral detergent. Use only detergents with a pH value between 5 and 9 in solvent. We recommend the use of linoleum care at least twice a year.

If a more thorough cleaning is required use a universal cleaning detergent according to the right dose recommendations. Wipe off with clean water. Hereafter you may want to apply care emulsion.

### Laminate:

Does not require any particular care. Laminate is a plastic product and as such may by and large be cleaned with any cleaning detergent, except for cleaning solutions that contain abrasives.

### General recommendations:

Do not place the furniture in wet rooms or areas with large variations in temperature and humidity. This will reduce the furniture's lifespan and appearance.
